INVESTIGATION OF THE ELECTRICAL FUSION OF THIN WIRES. June 60, 31p, 7 refs. Picatinny Arsenal Trans. no. 100; AD-240 588 Order from I.C or SLA m\$3.00, ph\$6.30 60-23115

Trans. of Zhurnal Eksperimental'noy i Teoreticheskoy Fiz[iki] (USSR) 1947, v. 17, p. 986-997.

Results are presented of an investigation of a condenser discharge through thin wires, obtained with the aid of an image scanning controlled optical shutter and instantaneous shadow photography. At the discharge of a condenser through a copper wire, a fusion-like dispersion of the material in individual fragments takes place. This is followed by a current break, conditioned by the occurrence of a great number of fusions; after the latter have been filled up with metal vapors - phase of the gas discharge. (Author)

Trans. of Teploenergetika (USSR) 1959 [v. 6, no. 3]
p. 26-29.

The Kharkov turbine works has created a last stage
blade of record size using stress relieved normal
chrome steel 1Kh13. Production of the last stage blade
caused no great technological difficulties and was ac-
commodated on normal longitudinal cutting machines
fitted with special devices. Experience gained showed
that there is a real possibility of creating still larger
last stage blading which will be reliable in operation.
